Compatible ink cartridges for HP 5000

The ink professionals at STAEDTLER now offer completely compatible ink cartridges for the HP 5000 after having launched the communicator refill solution for the HP 5000

3 years ago. STAEDTLER uses the original ink cartridges for which the company has developed its own recycling system. The cartridges are cleaned, refilled, with a new label and then receive a new chip. In order to maintain the recycling system, a deposit is imposed on the ink cartridges which are called reusable cartridges in the STAEDTLER technology. Apart from the fact that electronic waste can be avoided, the user can save himself up to 30 %

In order to raise the life expectancy of a cartridge, STAEDTLER has revised the inks for the HP 5000.
